PROFESSIONAL SUMMARY

ISTQB-certified Senior QA Engineer with 7+ years testing web applications across US healthcare systems, enterprise SaaS, and e-commerce. Currently own quality end to end for a three-application SaaS platform, building the Playwright UI and Postman/Newman API regression suites from zero and integrating them into Jenkins and GitHub Actions CI/CD alongside Product, Engineering, and DevOps. Hands-on across Playwright (TS/JS), Selenium (Python), API, and performance testing, with recent experience validating AI/LLM-driven features, leading root cause analysis with developers, mentoring QA engineers, and shaping quality standards in Agile teams.

TECHNICAL SKILLS

Test Automation: Playwright Test (TypeScript / JavaScript), Selenium WebDriver (Python, Pytest), hybrid framework design, Page Object Model, accessibility-first locators (role / label based), custom fixtures, parameterized tests

API & Performance: REST API testing, Postman, Newman, Playwright APIRequestContext, Apache JMeter (load, throughput, response-time validation)

CI/CD & Version Control: Jenkins, GitHub Actions, Git, automated pipeline integration, parallel execution, build stability gating

Cloud: AWS (CloudWatch log analysis for defect diagnosis, S3 test artifacts, deployed test environments)

Web & Data: HTML, CSS, DOM, client-server architecture, REST APIs, TypeScript, JavaScript, Python, SQL / MySQL

AI / GenAI Tools: Claude, Claude Code, GitHub Copilot, MCP servers for test generation and diagnostics

Test Types: Functional, Regression, Smoke, Integration, End-to-End, Sanity, API, UAT, Exploratory, Performance, Cross-Browser

Process & Tools: JIRA, Zephyr, Confluence, Agile / Scrum, test strategy, release criteria, defect triage, QA mentoring

PROFESSIONAL EXPERIENCE

Software QA Lead | OpenScreen Inc., Toronto, ON

Mar 2025 – Present

Playwright (JS / TS) · Postman / Newman · Apache JMeter · Jenkins · GitHub Actions · AWS · REST APIs · SQL · Claude Code / MCP

- **Architected a hybrid Playwright Test (TypeScript) framework as the only QA engineer** for UI and API coverage, using the Page Object Model, accessibility-first locators, custom fixtures, APIRequestContext and parameterized tests, cutting regression across healthcare and regulated enterprise SaaS applications including QR-based asset tracking and workflow platforms.
- **Own and continuously expand the Postman/Newman API regression suite** covering authentication, role-based permissions, workflow execution, asset lifecycle, and reporting across all three applications.
- **Integrated all suites into Jenkins and GitHub Actions pipelines** so every merge produces a quality signal, managing credentials, network access, and build-stability thresholds.
- **Reduced post-release defect escapes and shortened resolution cycles** by triaging failures through AWS CloudWatch to separate environment issues from real defects before escalating, and gating releases on defined quality criteria.
- **Ran load and performance testing in Apache JMeter** to validate scalability, throughput, and response times before enterprise onboarding.
- **Applied GenAI tooling and MCP servers** to generate test scripts, test data, and defect diagnostics, increasing coverage output per sprint.
- **Established the company's first QA documentation standards** covering test strategy, defect reporting, and release-validation checklists, giving stakeholders clear release readiness.

Software QA Engineer | Profound Impact Corporation, Toronto, ON

Jun 2024 – Mar 2025

Selenium WebDriver · Python · Pytest · Postman · MySQL · REST APIs · JIRA · Agile / Scrum

- **Built Selenium WebDriver (Python + Pytest) automation** for an AI-driven grant-matching platform, covering ~60% of the regression suite and sharply cutting execution time.
- **Reduced post-release defects 25%** through earlier, broader test coverage and a formalized defect lifecycle.

- **Evaluated AI matching output** against manager-defined metrics for relevance, correctness, and ranking, flagging false positives to improve recommendation reliability.
- **Performed API testing with Postman**, validating responses against MySQL to improve data accuracy across the matching pipeline.
- **Stood up QA documentation, test repositories, and defect standards** from the ground up, improving testability and risk coverage across Agile ceremonies.

Software QA Engineer | Cedar Gate Technologies, Greenwich, CT, USA (Remote)

Feb 2022 – May 2023

Healthcare · SQL · EDI 837 / 835 · XPath · In-house web automation platform · JIRA · Zephyr · Agile / Scrum

- **Tested healthcare and health insurance applications handling sensitive patient data**, validating claims, payment and member workflows against complex business rules and US healthcare regulation using SQL, including EDI 837/835 processing.
- **Automated smoke tests** on an internal browser-based automation platform with XPath-based element location, contributing to 65% smoke coverage across the QA team.
- **Mentored junior QA engineers** and led team test execution in the team lead's absence, keeping delivery and quality on track.
- **Created test requirements** from business rules and system architecture, feeding risk assessment and release planning.

QA Analyst | Daraz Kaymu Pvt. Ltd., Nepal

Jan 2020 – Feb 2022

ERP & e-commerce platforms · SQL · UAT · Regression & E2E testing · JIRA

- **Led UAT, regression, and end-to-end testing** across 6+ ERP and e-commerce platforms in a high-transaction marketplace environment.
- **Improved end-user acceptance through structured validation and defect resolution**, partnering with cross-functional teams to refine requirements and improve user experience.

Business Analyst / QA | Web Creation Nepal, Nepal

Jan 2018 – Dec 2019

UAT · Requirements & impact analysis · Test documentation · Stakeholder collaboration

- **Performed UAT, impact analysis, and scope validation**, reducing scope creep and aligning delivery with stakeholder goals.

OPEN SOURCE PROJECTS

- [selenium-python-framework](#) Selenium WebDriver framework in Python / Pytest: Page Object Model structure, reusable driver and configuration setup, and data-driven test cases.
- [Automation-Exercise](#) End-to-end UI automation suite (JavaScript) covering registration, product search, cart, and checkout flows on automationexercise.com.
- [Automation-ExerciseAPI](#) API test suite validating status codes, response payloads, and error handling across the same platform's endpoints.

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science & Information Technology | Tribhuvan University, Nepal | Distinction, GPA 3.8, 2017

- ISTQB Foundation Level Certified Tester (ASTQB), Feb 2025
- Selenium WebDriver 4 with Python (Udemy), Apr 2024
- Postman REST API Testing (Udemy), Sept 2024
- Scrum Fundamentals Certified (SCRUMstudy), Mar 2024
- Anthropic AI Certifications
