PROFESSIONAL SUMMARY

ISTQB-certified Senior QA Engineer with 7+ years across US healthcare, enterprise SaaS, and e-commerce. Currently the sole quality owner for a three-application SaaS platform, where I built the entire automated test infrastructure from zero and held release sign-off. Deep in Playwright (TypeScript), Selenium (Python), API and performance testing, with hands-on experience designing evaluation methodology for AI and LLM-driven features where there is no deterministic correct answer. Comfortable establishing testing practice where none exists and partnering directly with Engineering, Product, and DevOps.

TECHNICAL SKILLS

Test Automation: Playwright Test (TypeScript / JavaScript), Selenium WebDriver (Python, Pytest), hybrid framework design, Page Object Model, accessibility-first locators, custom fixtures, parameterized and data-driven tests

API & Performance: REST API testing, Postman, Newman CLI, Playwright APIRequestContext, schema validation, Apache JMeter (load, throughput, response-time analysis)

CI/CD & Version Control: Jenkins, GitHub Actions, Git, pipeline integration, parallel execution, build-stability gating, artifact and secret management

AI Quality Engineering: LLM output validation, recommendation-system evaluation, relevance and ranking assessment, false-positive analysis, Claude Code, GitHub Copilot, MCP servers for test generation and diagnostics

Cloud & Data: AWS (CloudWatch log analysis, S3 test artifacts, deployed test environments), SQL / MySQL, EDI 837 / 835, REST APIs, HTML, CSS, DOM

Test Types: Functional, Regression, Smoke, Integration, End-to-End, Sanity, API, UAT, Exploratory, Performance, Cross-Browser

Process & Tools: JIRA, Zephyr, TestRail, Confluence, Agile / Scrum, test strategy, release criteria, risk-based testing, defect triage, QA mentoring

PROFESSIONAL EXPERIENCE

Software QA Lead | OpenScreen Inc., Toronto, ON

Mar 2025 – Present

Playwright (TS / JS) · Postman / Newman · Apache JMeter · Jenkins · GitHub Actions · AWS · REST APIs · SQL · Claude Code / MCP

- **Inherited sole ownership of quality** for a three-application SaaS platform taking on release sign-off for healthcare and regulated enterprise SaaS applications including QR-based asset tracking and workflow platforms.
- **Architected the company's first automated test infrastructure for both UI and API** from zero: a hybrid Playwright framework using the Page Object Model, accessibility-first locators, custom fixtures, APIRequestContext, and parameterized test data, replacing a multi-day manual regression cycle that previously consumed the full QA team.
- **Expanded and hardened the Postman/Newman API suite** into full regression coverage across authentication, role-based permissions, workflow execution, asset lifecycle, and reporting for all three applications, and brought it under automated CI execution.
- **Embedded all suites into Jenkins and GitHub Actions** so every merge produces a pass/fail quality gate, managing credentials, environment access, and build-stability thresholds.
- **Eliminated engineering time lost to false escalations** by triaging failures through AWS CloudWatch to separate environment instability from genuine defects before raising them.
- **Validated scalability, throughput, and response times** in Apache JMeter ahead of enterprise customer onboarding, surfacing performance limits before they reached production.
- **Expanded coverage per sprint** using Claude Code and MCP servers to generate test scripts, test data, and defect diagnostics, treating AI output as a reviewed first draft rather than a shipped result.
- **Authored the company's first QA standards** covering test strategy, defect reporting, and release-validation checklists, now the formal release gate across all products.

Software QA Engineer | Profound Impact Corporation, Toronto, ON

Jun 2024 – Mar 2025

Selenium WebDriver · Python · Pytest · Postman · MySQL · REST APIs · JIRA · Agile / Scrum

- **Designed a structured evaluation methodology** for an AI grant-matching engine that had no deterministic correct answer, scoring outputs against defined relevance, correctness, and ranking criteria and flagging false positives that degraded recommendation quality.
- **Automated ~60% of the regression suite** in Selenium WebDriver (Python + Pytest), converting the platform's longest manual verification cycle into a repeatable automated run.
- **Reduced post-release defects 25%** by shifting coverage earlier and formalizing the defect lifecycle from report through verification.
- **Caught data-integrity mismatches** in the matching pipeline by validating API responses directly against MySQL before they surfaced in user-facing results.
- **Established QA documentation and defect standards** from scratch for a team with no prior QA function, including test repositories and reporting conventions.

Software QA Engineer | Cedar Gate Technologies, Greenwich, CT, USA (Remote)

Feb 2022 – May 2023

US Healthcare · SQL · EDI 837 / 835 · XPath · In-house web automation platform · JIRA · Zephyr · Agile / Scrum

- **Tested payment model adjudication** across bundled payments, capitation, and fee-for-service on an enterprise value-based care platform, validating episode construction, attribution, and reconciliation against contract terms.
- **Caught silent calculation defects** in claims and payment processing, where errors throw no exception but carry regulatory and financial exposure, by deriving expected payment amounts independently in SQL before comparing them against system output.
- **Validated claims, members and providers workflows** against complex payer business rules and US healthcare regulation, including EDI 837 / 835 transaction processing on sensitive patient data.
- **Automated smoke tests** on an internal browser-based automation platform using XPath-based element location, contributing to 65% smoke coverage across the QA team.
- **Mentored junior QA engineers** and led team test execution during the team lead's absence, holding release timelines without escalation.

QA Analyst | Daraz Kaymu Pvt. Ltd., Nepal

Jan 2020 – Feb 2022

ERP & e-commerce platforms · SQL · UAT · Regression & E2E testing · JIRA

- **Led UAT, regression, and end-to-end testing** across 6+ ERP and e-commerce platforms in a high-transaction marketplace environment.
- **Partnered with product and engineering** to tighten requirements before build, reducing rework and raising acceptance rates at UAT.

Business Analyst / QA | Web Creation Nepal, Nepal

Jan 2018 – Dec 2019

UAT · Requirements & impact analysis · Test documentation · Stakeholder collaboration

- **Ran UAT, impact analysis, and scope validation** across client web projects, cutting scope creep by resolving requirement ambiguity before development started.

AUTOMATION PORTFOLIO

- **Automation-Exercise**: Playwright / JavaScript suite covering smoke, regression, and end-to-end flows: accessibility-first Page Objects, dual-scope fixtures, tag-driven suite selection, a custom Excel reporter for stakeholders, and a GitHub Actions pipeline running on push, pull request, and nightly schedule.
- **Automation-ExerciseAPI**: Postman / Newman API regression covering all 14 documented endpoints with positive, negative, and edge cases (400 / 404 / 405), a self-cleaning create-read-update-delete lifecycle, and secrets templated out of version control.
- **Selenium-python-framework**: Selenium WebDriver framework in Python / Pytest: Page Object Model structure, reusable driver and configuration setup, and data-driven test cases.

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science & Information Technology | Tribhuvan University, Nepal | Distinction, GPA 3.8, 2017

- ISTQB Foundation Level Certified Tester (ASTQB), Feb 2025
- Postman REST API Testing (Udemy), Sept 2024
- Selenium WebDriver 4 with Python (Udemy), Apr 2024
- Scrum Fundamentals Certified (SCRUMstudy), Mar 2024
